Business challenges

But what do these challenges mean for your organization in concrete terms? We'll immerse you in the key digital priorities for each industry and what these will yield.

Manufacturing

- + *Connected Product Innovation:* change the R&D department, create smart, connected products
- + *Connected Industrial Services:* change products into a digital service by creating new business models that present new opportunities

Public infrastructure

- + *Data Driven Construction:* competitive advantage and new business models due to the Internet of Things (IoT) and data analytics
- + *Connected Construction Site:* considerable increase in security due to connected devices
- + *Digital Asset Management:* sensors, cameras, public data show how infrastructure is used
- + *Smart Cities:* Optimum coordination of urban connections by means of smart software. Watch the video [here](#)
- + *Smart Charging:* : Electric driving will become the new standard with these smart, innovative solutions. Watch the video [here](#).
- + *Smart Grids:* : A solid foundation for a future full of smart energy. Watch the video [here](#).

Industry

- + *Connected Factory:* connect the factory floor, machines and production lines up to the Internet of Things
- + *Connected Operations:* achieve operational excellence, expedite the transition to digital factories and supply chains

Solutions

The use of smart cloud solutions will put your organization in the driving seat during the digital transformation. Keen to find out more about what the digital transformation means for your business?
